

# LOFTED DRIVERS

More loft = more yards. It says here that these drivers, all of which have a minimum of 12°, will help you hit further and straighter than ever before. So give one a go – all you've got to lose is your ego!

## Six reasons to use a lofted driver

- The modern ball spins less – and backspin is what keeps the ball in the air. So for maximum distance you need to launch the ball higher
- The slower your swing speed, the more loft you need to achieve an optimum trajectory
- The more loft a club has on it, the less sidespin it imparts. So you will hit it straighter
- More loft = more margin for error. So your mishits will fly further through the air
- You will not be reliant on dry, hard fairways to achieve maximum distance
- More loft = more confidence. So you will swing better, more often
